

## Environmental Policy

Isles Construction is committed to understanding and minimising any adverse environmental impacts of our business and to integrate the principles of environmental sustainability throughout our operations. We will do this without compromising on the quality of our building and service expectation of our clients.

To achieve this we will:

- Sort where possible all waste material into categories for timber, steel, plastic and clean-fill
- Take all measures to ensure that no water ways are contaminated and ensure that no paint, thinners or other solvents are disposed of into either storm or sewage systems
- Endeavour to minimise waste in any of our products or services and recycle where possible
- Identify opportunities and implement procedures to reduce the generation of waste and prevent pollution
- Promote environmental awareness and responsibility among our employees, customers, sub-contractors and suppliers.
